**Stock Advisor returns as of August 3, 2026*

TAKEAWAYS

- **Revenue** -- ****Infosys Limited** (INFY (/quote/nyse/infy/)) -2.58%** reported \$502 million in quarterly revenue, reflecting a 1% sequential increase and 2.4% year-over-year growth

in constant currency terms.

- **AI Revenue** -- Artificial intelligence services reached 8.2% of overall revenue, growing at double-digit rates quarter over quarter for several periods.
- **Large Deal TCV** -- Total contract value for large deals was \$3.6 billion, with 61% representing net new business.
- **Operating Margin** -- The company reported an operating margin of 21.1%, including tailwinds of 70 basis points from rupee depreciation and 20 basis points from Project Maximus.
- **Revenue Guidance** -- Full-year revenue growth guidance was revised to 1.5% to 3% in constant currency terms, factoring in lower volumes and a specific 50 basis point impact from a program termination.
- **Earnings Per Share** -- EPS increased 15% year over year in rupee terms, reaching INR 19.19.
- **Free Cash Flow** -- The company generated \$955 million in free cash flow, representing 16.5% of net profit for the quarter.
- **Acquisitions Impact** -- Recently closed acquisitions, including Optimum Healthcare, contributed approximately 1.1% to sequential revenue growth.
- **Utilization** -- Utilization excluding trainees improved by 1.9 percentage points to 84.9% during the quarter.
- **Headcount** -- Total headcount decreased by 500 employees to 328,594, despite the addition of 2,000 employees through acquisitions.
- **Large Deal Breakdown** -- The company signed 22 large deals, including three agreements worth \$400 million each, with 20% of total large deal value coming from vendor consolidation.
- **Attrition** -- Voluntarily attrition increased slightly to 13% from 12.6% in the prior quarter, which management attributed to typical seasonality.
- **On-site Mix** -- Management expects the on-site mix to reduce by 75 basis points to 1% over the course of the fiscal year.

- **Cash Balance** -- Consolidated cash and cash investments totaled \$3.9 billion at the end of the quarter after returning more than \$1 billion to shareholders via dividends.
- **Wage Hikes** -- Salary increases are scheduled to take effect in October for the majority of employees and in January 2027 for the remainder.
- **Manufacturing Segment** -- Manufacturing revenue was impacted by a reduction in spend from a large European manufacturing client, creating a headwind of over 1% for the year.
- **Financial Services Sector** -- The financial services vertical saw approximately \$1 billion in large deal net new TCV despite cautious spending patterns in banking and payments.
- **Tax Rate** -- The effective tax rate for the fiscal year is expected to range from 29% to 30%.
- **Frontier Engineers** -- The company plans to build a team of 6,000 frontier engineers over the next few years to support advanced AI client projects.
- **College Recruitment** -- Management intends to recruit 20,000 college graduates during the current fiscal year, with over 4,000 already hired in the first quarter.
- **Project Maximus** -- This operational efficiency program provided a 20 basis point tailwind to margins during the quarter.
- **Program Termination** -- A project termination in the ERS vertical resulted in a one-off 50 basis point impact on revenue and a 40 basis point impact on margins.

RISKS

- Sanghrajka noted, "Q1 revenue growth was lower than our expectations, mainly due to one-off 50 basis point impact on account of program termination by an client during the quarter," referencing a specific cancellation in the ERS vertical.
- Sanghrajka stated, "Growth in manufacturing continues to be impacted due to lower revenue from a large client," as elongated decision-making cycles persist in the European automotive sector.

- Sanghrajka mentioned, "Additionally, client expectation on productivity, along with high competitive intensity is resulting in softer increase in price versus our expectations," highlighting pricing pressure during renewals.

SUMMARY

Management reported constant currency revenue growth and stable operating margins for the first quarter of fiscal 2027. The company announced a long-term leadership transition plan involving an internal successor to the Chief Executive Officer role. Strategic priorities centered on expanding artificial intelligence services and the Topaz fabric platform. Financial performance was influenced by one-time client decisions and competitive pricing pressures in specific segments. Leadership highlighted large deal momentum and continued investments in specialized engineering talent to support digital transformation initiatives.

- Chairman Nilekani stated, "his time is coming to an end on March 31, 2027," regarding the transition from current CEO Salil Parekh to internal successor Ashish Dash.
- CEO Parekh noted, "over 80,000 employees are working today on coding tools such as Cloud Codex for our clients," indicating widespread internal deployment of AI productivity software.
- CFO Sanghrajka noted, "We expect on-site mix excluding new acquisitions to reduce by 75 basis points to 1% for the year," as part of an ongoing effort to optimize the offshore delivery model.
- Parekh described the Topaz Fabric as a platform that "allows our clients to get benefits of [generative AI] while keeping the sovereignty of their data and company knowledge with themselves."
- Management reported that 20% of total large deal TCV originated from vendor consolidation deals, indicating a shift toward fewer, more reliable technology partners.
- The company identified six specific AI value pools under its Hexagon strategy, with the strongest traction currently seen in process AI, AI engineering, and data for AI.
- Parekh confirmed that despite some AI-driven compression in contracts, the company is finding opportunities to capture adjacent work through its Topaz platform and multi-model flexibility.

Should you buy stock in Infosys right now?

Before you buy stock in Infosys, consider this:

The Motley Fool *Stock Advisor* analyst team just identified what they believe are the **10 best stocks** (https://api.fool.com/infotron/infotrack/click?apikey=35527423-a535-4519-a07f-20014582e03e&impression=869471d2-fa20-490e-9c5d-503e2adfd3c7&url=https%3A%2F%2Fwww.fool.com%2Fmms%2Fmark%2Fe-sa-bbn-bn%3Faid%3D11287%26source%3Disaeditxt0001229%26ftm_cam%3Dsa-bbn-evergreen%26ftm_veh%3Darticle_pitch%26ftm_pit%3D19769) for investors to buy now... and Infosys wasn't one of them. The 10 stocks that made the cut could produce monster returns in the coming years.

Consider when **Netflix** made this list on December 17, 2004... if you invested \$1,000 at the time of our recommendation, **you'd have \$421,943!*** Or when **Nvidia** made this list on April 15, 2005... if you invested \$1,000 at the time of our recommendation, **you'd have \$1,382,819!***

Now, it's worth noting *Stock Advisor's* total average return is 983% — a market-crushing outperformance compared to 216% for the S&P 500. Don't miss the latest top 10 list, available with *Stock Advisor*, and join an investing community built by individual investors for individual investors.

*Stock Advisor returns as of August 15, 2026.

INDUSTRY GLOSSARY

- **Project Maximus:** An internal Infosys initiative focused on improving operational efficiency and expanding operating margins through cost optimization.

- **Topaz:** An AI-first suite of services, solutions, and platforms powered by generative AI technologies.
- **Frontier Engineers:** Specialized technical roles at Infosys focused on advanced AI development, large language models, and high-end engineering tasks.
- **Constant Currency:** A financial metric that eliminates the effects of foreign exchange rate fluctuations to show underlying business performance.
- **TCV:** Total Contract Value, representing the total revenue value of a signed contract over its entire duration.
- **CCV:** Contractual Closing Value, a measure of the total value of deals finalized during a specific period.
- **On-site Mix:** The ratio of work performed at a client's location versus work performed at offshore development centers.
- **Hexagon:** A strategic framework used by Infosys to categorize and track six distinct value pools in its artificial intelligence business.
- **ERS:** Engineering and Research Services, a business vertical focused on product engineering and research and development.

Full Conference Call Transcript

Operator: Ladies and gentlemen, greetings, and welcome to Infosys Limited Q1 FY '27 Earnings Conference Call. Please note that this conference is being recorded. I now hand the Conference over to Mr. Sandeep Mahindroo. Thank you, and over to Mr. Mahindroo.

Sandeep Mahindroo: Thank you, everyone, and welcome to this earnings call to discuss Infosys Q1 FY '27 financial results. Joining us on this call is Chairman of the Board, Mr. Nandan Nilekani; CEO Mr. Salil Parekh, CFO Mr. Jayesh Sanghrajka, along with other members of the leadership team. We'll start the call with some remarks by Nandan, followed by remarks by the performance. Subsequent to that, we'll open up the call for questions with Kindly note that anything we say which refers to our future outlook is a forward-looking statement that must be read in conjunction with the risk that the company faces.

A full statement explanation of these risks is available in our filings with the SEC, which can be found on www.sec.gov. I'd now like to pass on the call to Nandan.

Nandan Nilekani: Thank you, Sandeep, and it's really a pleasure to talk to all of you. I joined this call to make an important announcement. As you know, Salil has done a stellar job as the CEO for almost 10 years. And under his leadership, the company has grown from \$10 billion to \$20 billion. He's done the transition to the digital era. And he's laid the foundation for a differentiated AI strategy, which will serve the company in good stead for many more years. However, his time is coming to an end on March 31, 2027. And the Board has decided today to appoint CEO -- a new CEO who is coming from inside Infosys from within an internal candidate.

His name is Ashish Dash. Asish Dash has been in Infosys for more than 31 years. Since he joined as a software engineer from . And he has -- he has all-around experience of Infosys - - he has worked in delivery for many years. He has worked on account management. He has been involved with starting a DC in Bhubaneswar where he has been in sales. And of course, he has been a sales , segment head for many years running the sure practice, which has many verticals. And he is an outstanding person. He's very good at his job. He's very collegial. He's very good collaborative. He's accepted and liked by everybody in the company.

He has a quintessential Infosys values -- at the same time, he's focused on the market and being able to get good deals at good revenue and good margin. And because of his technical background, he understands the AI, what is happening and that will help him in the future. So the Board has appointed Mr. Dash as the CEO Designate. He will work with sell over the next few months -- next 2, 3 months, we'll focus on getting more coaching and training on being a CEO.

And then for 6 months, he will work as a mentee under Salil's leadership, who will grow him for the complex job of managing a \$20 billion company at a very transformational time. So we are all very excited by the choice. It has got a very good response internally and with customers. And you will get to see him in a few months. So you can maybe keep that in mind. Maybe I now I'll ask Salil to add a few words on Dash.

Salil Parekh: Thanks, Nandan. Good morning, good evening, everyone. It's an absolute pleasure for me to have Dash be the next CEO of the company. I've had the opportunity to

work with him over the last several years. In my mind, he's a fantastic leader and very good with the people around. He's worked very closely with clients and build a portfolio, which is, I think, quite strong and exceptional on the growth dimension and the way it's managed operationally and economically -- so all of the ingredients which make for a successful business. In addition, to his leadership, Dash is a very good friend, and I'm delighted for this. Congratulations to him.

And then I look forward to working with him over the next -- the course of the next few months, as Nandan mentioned, in the way we transition in a smooth transition there. So look forward to all of that. And as Nandan said, you will get to meet Dash in the coming quarters as well.

Nandan Nilekani: So thank you, and I'll excuse myself and Salil and Gareth, the team will continue the quarterly call. Thank you very much.

Salil Parekh: Thanks, Nandan. Good evening and good morning to everyone on the call. Thank you for joining us. Let me start off with the update for the business in this quarter. Our revenue growth for Q1 was 2.4% year-on-year and 1% quarter-on-quarter in constant currency terms. We had a onetime revenue impact of a client decision during this quarter. Our AI services revenue was 8.2% of overall revenue. Our large deals were \$3.6 billion with a net new of 61%. And operating margin was 21.1%, free cash flow at \$955 million, and our earnings per share were higher by 15% in Q1 in rupee terms.

We saw a strong acceleration in our AI business, as I shared earlier, with AI revenues for the quarter at 8.2%. And -- this is growing at double-digit quarter-on-quarter over the last several quarters. With this momentum, we see long-term relevance of our services for our clients. From a delivery team, over 80,000 employees are working today on coding tools such as Cloud Codex for our clients and for some projects in side. We saw strong traction across the 6 areas of growth in our AI strategy, Hexagon -- we see client work, for example, in building agents for processes, work on data, in AI, in modernization and, of course, encoding tools.

For a health care company, we implemented AI agents to automate Medicaid eligibility verification and operation support. The solution reduced eligibility verification time from -- which was about 6 to 8 days to approximately 4 minutes. We are building a team of frontier engineers to support our client work -- our plan is to have 6,000 frontier engineers over the

next few years. We built a platform to pass fabric that allows our clients to get benefits of while keeping the sovereignty of their data and company knowledge with themselves.

Our clients are able to work with any foundation model closed, open weight, on cloud, on the server to pass fabric provides a harness to a client to enable them to more fully deploy the benefits of the foundation models into their organization. Our clients are also able to optimize their token cost by ensuring appropriate models are used for appropriate tasks. Overall, we see a good pipeline for AI services, and that gives us a good view for continued AI work with our clients. Outside of that, we continue to see the macro environment remaining uncertain.

With our Q1 results and a view of the rest of the financial year, we changed our revenue guidance revenue growth guidance to 1.5% to 3% year-on-year growth in constant currency terms. Our operating margin guidance remains the same at 20% to 22%. I -- thank you. And with that, let me hand it over to Jayesh for his update.

Jayesh Sanghrajka: Thank you, Salil. Good morning, good evening, everyone, and thank you for joining the call today. We entered FY '27 against a backdrop of a dynamic and evolving business environment, which is reflected in lower-than-expected volumes. Clients continue to prioritize investments in AI modernization, cloud and productivity initiatives while remaining selective in discretionary spending. Our focus remains on disciplined execution supporting clients' transformation agenda and delivering sustainable financial performance. Q1 revenues were at \$502 million, an increase of 1% sequentially and 2.4% year-on-year in constant currency terms. Acquisition contributed approximately 1.1% sequentially. Our AI revenue momentum is very strong with AI revenues at 8.2% of our overall revenues, growing at a strong double digit sequentially over the last many quarters.

We are seeing strong traction across all 6 value pools with higher share of revenues coming from process AI, AI strategy and engineering and data for AI. Q1 revenue growth was lower than our expectations, mainly due to one-off 50 basis point impact on account of program termination by an client during the quarter. This was not factored in the earlier guidance. Volumes were soft and weaker than expectations and also versus the historical Q1 trends. Additionally, client expectation on productivity, along with high competitive intensity is resulting in softer increase in price versus our expectations.

Sequential revenue growth was also impacted by higher offshoring to derisk our business model, along with lower revenues from a European manufacturing client, as I mentioned in the last earnings call. Despite lower-than-expected growth, gross margins improved by 60 basis points sequentially. Operating margin improved by 20 basis points sequentially to 21.1%. Major components of the change are as low tailwinds of 70 basis points from rupee depreciation, 20 basis points from project Maximus, 20 basis points net benefit due to amortization of costs on intangibles incurred in Q4, offset by impact of new acquisitions in Q1.

Headwinds of 50 basis points from investment in AI sales and marketing, 40 basis points from onetime revenue impact arising out of program termination. We also had onetime cost benefit of approximately 30 basis points, which was offset by 20 basis points due to increase in various other expenses. Our tight focus on improving operational efficiency led to utilization, excluding trainees, improving by 1.9% to 84.9%. On-site mix, excluding new acquisitions, dropped by 30 basis points. However, including acquisitions, it remained flat. We expect on-site mix excluding new acquisitions to reduce by 75 basis points to 1% for the year. reduced by 4 days sequentially to 63%. DSO, including unbilled net of unearned was 76 days versus 78 in Q4.

Headcount reduced by 500 employees after adding over 2,000 employees from acquisitions. -- attrition increased slightly to 13% versus 12.6% sequentially in line with Q1 seasonality. We plan to give salary hikes to most of our employees effective October while the rest of the employees will be covered in January '27. We expect effective tax rate for the year to be in the range of 29% to 30%. EPS for the quarter stood at INR 19.19 up approximately 15% year-on-year. Q1 yield noncash investment balance was at 6.8%. Our balance sheet continues to be strong and debt-free.

Consolidated cash and cash investments were at \$3.9 billion at the end of the quarter after returning more than \$1 billion to the shareholders through dividends. Free cash flow was strong at \$955 million at 16.5% of net profit. Large deal wins were strong at \$3.6 billion with high net new of 61%, reflecting the relevance of our value proposition. Out of the 22 large deal one, we had three deals worth \$400 million each. We have been on the positive side of vendor consolidation, with 20% of the total large deal CCV being from new vendor consolidation deals.

Vertical-wise, we won five deals in financial services and communications, four in EURS, three in manufacturing, two in retail, one each in life science, high-tech and others. Region-wise, we signed 11 deals in North America, 8 in Europe and three in the rest of the world. Coming to verticals. In financial services, uncertainty and geopolitical instability is causing some clients' hesitancy as spending patterns are taking a more cautious approach. -- client priorities are centered on efficiency, productivity and modernization with being evaluated more carefully. We see momentum across banking, payments, capital markets and wealth management. AI adoption has been incrementally incremented an additive with clients increasingly engaging us to support their AI journeys across strategy, platforms, engineering and operations.

This is reflected in our strong deal wins this quarter with approximately \$1 billion in large deal TCV or largely in net new TCV, GCCs continue to expand, and we are partnering with our clients both in setup and . Growth in manufacturing continues to be impacted due to lower revenue from a large client. Clients remain cautious on discretionary spend and decision-making is elongated, especially in European auto. The impact of tariffs, geopolitical uncertainty and energy cost is keeping budgets tightly controlled. While AI adoption is creating new opportunity areas, it is also raising productivity expectations from clients. We are getting better pricing on AI skills and consulting.

We remain focused on supporting clients through digital AI modernization and consolidation initiatives while balancing growth opportunities with disciplined deal selection and sustainable pricing. EURS segment was impacted by one-off client termination, adjusted for which the growth was strong. Macroeconomic uncertainty continues to influence client spending patterns and decision-making time lines. Clients are driving business priorities, including cost optimization, operational resilience, productivity improvements and regulatory compliance. Generative AI is emerging as a strong growth catalyst, driving process reimagination and productivity initiatives. Our partnerships with hyperscalers and AI native companies is allowing us to experiment and ideate faster.

In retail and CPG, consumer spend remains muted and budgets are tightly controlled due to geopolitics, inflation and talent. -- spend is shifting towards AI modernization and productivity-led programs funded through operational efficiency and cost optimization. Clients are asking for productivity commitments leading to new pricing structures. We are leveraging our native knowledge of the clients' business processes and technology landscapes and augmenting it with AI. Large deal pipeline is healthy, but decision cycles

are longer. In Communications, operating environment remains challenging as clients continue to exercise discipline on discretionary spending and closely scrutinize investment decisions.

AI is reshaping spending patterns, enterprises are increasingly prioritizing initiatives that deliver near-term gate. is undergoing significant transformation with consolidation and M&A with increased investments, especially for OEMs. We remain focused on aligning our offerings to these evolving client priorities and helping enterprise realize measurable business outcomes. Considering lower-than-expected Q1 revenues and revised view of the rest of the year, we are revisiting our revenue guidance to we are revising our revenue guidance to 1.5% to 3%.

This includes approximately 1.7% contribution from recently closed acquisitions of care and slightly over 1% impact from large European manufacturing clients due to reduced client spend along with our conscious decision to not pursue certain deals that were not aligned to our return expectations approximately 0.75% to 1% impact from shift towards offshore. Overall business environment continues to remain volatile. The lower end of the guidance assumes further deterioration in macro top end of the guidance assumes an improvement in macro, although lower than what we had assumed in April guidance. FS and EURS are expected to grow higher than the company average. The underlying fundamentals of our business remains strong.

We continue to see healthy client engagements leading to a robust pipeline. We are taking decisive actions to capitalize on the opportunities ahead, especially on six identified AI value pools. Spending is shifting towards areas with clear business cases such as AI modernization, cost transformation, cybersecurity, cloud optimization and vendor consolidation. As we look at the rest of the year, we remain confident in our strategy, discipline in our investments and focus on delivering stronger performance. Margin guidance is maintained at 20% to 22%. This assumes headwind from wage hikes productivity pass-throughs, AI investments and 50 basis point impact from acquisitions of optimum health care and strategies.

These headwinds will be partly offset by initiatives under project maximums and currency benefits. With that, we can open up for the questions. Thank you.

Kumar Rakesh: My first question was a bit of a clarification around the guidance, especially the like-to-like guidance what we had given last quarter versus this quarter. If I'm looking at the new guidance that is at the midpoint, suggesting 2.25% sort of growth, which I understand you indicated includes acquisition of about 1.7%. So that would imply and organic growth of about 0.5% or slightly higher than that versus 2.5%, which was in the last quarter. So is that about 2 percentage point of cut at the midpoint in the guidance or am I reading that wrong?

Jayesh Sanghrajka: Kumar, so the last quarter would be -- midpoint would be around [2.2%]. In the guidance because, as you say -- as you remember, we had said 20 basis points was the status, which was already baked in, in the guidance, which was 1.5 to 3.5.

Kumar Rakesh: Okay. Got that. So in that case, like to like this time, it would be about 8 points sort of a number, excluding the incremental acquisition that we have baked in.

Jayesh Sanghrajka: Yes.

Kumar Rakesh: Got that. And looking into the second quarter, given some of the impact that we have seen in this quarter with lower-than-expected volume and onetime client-related decision as well, how much of that you are expecting that to flow into second quarter as well? And how you are looking at the demand environment and the growth momentum?

Jayesh Sanghrajka: So Kumar, as you know, Typically, whatever happens in Q1, it will have a cascading effect in Q2. And especially if the volumes have been softer through the Q1, automatically, it will have some impact on Q2 and therefore, the rest of the year. That kind of largely explains the guidance change. As I said earlier, the multiple reasons on the change in guidance is, first of all, one-off that we had in 1 of the EURS plants the volumes that were softer with the cash-cutting effect, the ask of productivity from clients and increased competitiveness competition in pricing that reflected in a lower-than-expected pricing this quarter, which will again have effect on the rest of the year.

And as I had called out at the beginning of the year, we expect our on-site mix to be lower by roughly around 0.75% to 1%, which will have impact on a year-to-year comparison, if you're doing. We had called out a European manufacturing clients impact between 0.75% to 1% last time, which is now clearly above 1% as we have progressed on certain other

deals as well. So that is an additional headwind as well. So all of that is baked in the revised guidance.

Kumar Rakesh: Just one clarification around the onetime client decision which you spoke about, if you could give some context to that, that would be great. That's all from my side.

Jayesh Sanghrajka: Thanks so much. So this is with respect to a client, which has terminated a project in the ERS vertical.

Yu Lee: You mentioned that softer volumes and pricing contributed to Q1 alongside the premium termination and at the upper end of the prior guide assumed macro stabilization, that's not materialized. Can you walk us through how the quarter progressed relative to internal expectations, whether April, May and June trended differently when the program termination was communicated to you and whether decision-making velocity and discretionary spend deteriorated or stabilized through the quarter? And what have you seen in the first 2 weeks of July that may inform your shape of Q2?

Jayesh Sanghrajka: So Jonathan, sorry, I wasn't very clear with the question, but from whatever I understood the question is whether we saw the change through the quarter and the increase in volatility. The softness that we saw in terms of volumes was through the quarter, the one-off impact that we saw was mainly on account of a client termination, which happened towards the end of the quarter. And the additional -- the deal that we talked about, European client that was also towards the end of the quarter. So I think all of those factors reflected in the revised guidance, if that is what you're looking at.

Yu Lee: And given your commentary on pricing, particularly around the competition has been building for several quarters and MAXIMUS explicitly includes value-based selling. Why were pricing headwinds not more fully contemplated in the April outlook what has changed over the last 3 months? Is the pressure concentrated in specific verticals or deal types of renewals versus the new? And what gives you visibility that pricing may actually stabilize from here?

Jayesh Sanghrajka: Jonathan, we are not saying that we are not seeing a price increase. What I'm saying here is we haven't seen the as much price increase that we envisaged at the beginning of the year. on the back of the productivity ask of the clients, plus the

intensifying competitive competitiveness in the market. But we are still seeing a net increase in the pricing.

Gaurav Rateria: My first question is on the multiple client-specific issues, one is the European automotive that we highlighted last quarter than this quarter on the EURS vertical -- how should we think about all these like our completely disconnected issues and just happened to take place at the same time coincidentally, or there are certain common links, which basically could be early renewals, competitive pricing, et cetera, going on because of the technology change. So just trying to understand how much of it is led by underlying changes in technology happening and driving clients to take these decisions and creating competitiveness in the market? Or is -- are they completely disconnected events?

Jayesh Sanghrajka: So Gaurav, there are two parts of the question. One is the European manufacturing client that you talked about it, we knew certain part of the deals that we had we knew at the beginning of the year, which was in April, and there was additional deals that happened in Q1 of this year. Both of these were the deals where we did not -- we decided not to pursue the deals beyond a certain point because it was not economical -- it did not make economic sense for us a commercial sense for us -- and that is -- that's the reason that has nothing to do with the client behavior in terms of AI, et cetera.

The other deal is a contract where the client has terminated the contract for various reasons. Again, nothing to do with AI here. It's a termination of the contract. And therefore, a reduction in revenue.

Gaurav Rateria: Got it. My second question is on your margin outlook. I know that you maintained your outlook on the bank, but now that you have announced the wage hike for second half for the company as a whole. So there will be incremental headwinds around that. So just wanted to understand what would be some levers that will help you to offset these pressures in the second half? And would it be fair to say that our aspiration will be to just hold on the margin level compared to the last year in this year?

Jayesh Sanghrajka: Gaurav, at this point in time, we have given a guidance of 20% to 22% let me say that at the outset, we are very confident of that guidance. Of course, as I called out at the beginning of the year, we will have a headwind coming out from the acquisition that we have done from -- in terms of amortization of intangibles and retention be out of to

the founders or the management team, et cetera, or the acquired entities. But we also have tailwinds coming from currency coming from project maximums.

As you see this quarter also, we've got 20 basis points of tailwinds from project maximum, 70 basis points of currency -- so all of those are tailwinds. As we look forward, as I said earlier as well in the call, we will have 75% to 1% reduction in on-site mix. So that is -- so all of those are tailwinds. -- puts and takes all of that put together, we are still very confident of maintaining our margin guidance.

Abhishek Pathak: I think my question is on deal wins. It does look like we've had a pretty decent quarter on deal TCV net new seems to be decently strong as well as compared to historical levels. But clearly, that's not kind of translating into kind of guidance. So -- how is the TCV versus ACV dynamic playing out? Are we seeing extended TCV sort of or extended 10 years right now, which is leading to lower ACV? Or are we seeing sort of delayed ramp-ups, but clients are still coming in to spend, that will be help to understand with regards to the conversion of the deals that we are winning.

Jayesh Sanghrajka: So Abhishek, if you look at the deal typically, the terms of the large deals have not gone up. They still remain between on an average between 3 to 5 years. Of course, when you look at some of the mega deals, the terms are -- could be longer. But in the current year, the -- we have most of the deals which are not made -- the deals that we signed, most of -- while most of them were less than \$500 million. We did have some deals between \$400 million to \$500 million, 3 of them.

What we also need to remember is whenever the deal comes up for renewal, we always used to have the additional productivity asked from the client, which is how traditionally this industry has been -- on the back of AI, there is a deflation on -- additional deflation on the AI deflation as we call it. So that's a headwind that's there. That's only on the large deal portion that's also there on the non-large deal portion. So that is what is getting offset by the net new business that we are seeing.

Abhishek Pathak: Understood. And could you quantify the deflation, if you can? I know it's - - I mean, it's so dynamic, but just a clarification about the depletion would be helpful. And lastly, how do we define AI-led revenues? Is this AI implementation or are infused just a broad sort of sense of that will also be very helpful. That's from my side.

Salil Parekh: This is Salil. On the AI line, and I'll come to the other one after that. I think what we are seeing on the AI revenues is these are revenues which are coming from the strategic framework we described at the Investor Day, which are the six areas that we see new growth, the new addressable market of \$300 billion. For example, process AI, for example, making AI engineering strategy work. For example, data, which is needed the data layer for AI. And each of those six areas, we see a good growth. This revenue is 8%, 8.2%, growing double-digit Q-on-Q over the last several quarters. And that's the primary AI revenue.

Internally, we also look at AI revenue, which you referenced like infused augmented or where AI is and part of an existing work stream that becomes more AI. But this specific one that we shared externally is what we see from the AI strategy that we put together. On the -- so on the quantification, we don't quantify that compression part externally, but we acknowledge that, of course, there is a compression. And internally, we track it to see how that works. Now in many cases, when there is the compression, we typically given the work we are doing with clients, have the opportunity to do more work in other areas.

So the contract terms, scope, et cetera, gets really fine. And in many cases, we see adjacent to that other pieces of work, not related to that, which come through. So it's very -- it's not easy to simply say like-for-like in many cases, but they're definitely we see a compression.

Jayesh Sanghrajka: So just to add to what Salil saying, the AI first revenue is everything that is around the Hexagon and AI augmented revenue is what we presented on the also. That is not part of this. While we track it internally, that is still not part of this. So first is everything that we do in terms of Hexagon and the subservices that we called out at Hexagon. We have a very robust process inside the company of identifying these other child subproject level. and tracking it and monitoring it. It is growing at a very strong double-digit growth.

Ankur Rudra: I'm just curious to start with on the demand environment worsening especially from a PI product to pass through demand that we've been getting. Can you talk about how secular this is across our industries and geographies? And how often do you see... Is this clear now? Sure. So my question was on the worsening demand environment from an EI productivity pass-through perspective. How secular is this across industries and

geographies -- and how often do clients ask for productivity increases in the middle of a contract as opposed to on renewal.

Salil Parekh: This is Salil. Ankur, I think -- what we are seeing is there is a demand for AI productivity, which is across most industries. Now if you look at where AI is most getting used -- we probably see telcos, we see financial services. We see even on retail utilities. That's where their usage is pretty high, especially with the foundation models, the modernization, the coating tools. On the productivity side, it's a broad sort of coverage that we see. And it typically at least in the recent past has come up as there's progress made by the AI foundation model companies or there's a perception that, that sort of a benefit can be achieved the discussion stats.

And of course, at the renewal time, it's definitely time. Sometimes it does come in between the time frame of the contracts renewal as well there.

Ankur Rudra: Okay. I just wanted to sort of follow up on AI revenues, which have been growing at a very high pace like you've been highlighting. -- if we think this out a few years, at what size of your overall portfolio do additive to be so that you can overcome the deflation of the compression in the rest of the portfolio in thought set.

Salil Parekh: So we don't have a view in that sense externally on what you're sort of referencing -- but I think if we are able to execute on this AI transformation, as we have done in the last few quarters, we get this sort of momentum -- it's not that difficult to see that in the coming few quarters, it will start to become more and more larger part of our overall revenue and that will drive the growth of the overall company.

If I go back to how we saw it, not that it's the same thing, but there's some lessons maybe on the digital, we saw that there was a way that at one stage, we were at 20% and then over a few years, we then went to 60% of our revenue becoming digital. So if that sort of path becomes followed we can see a big sort of a transformation and a long-term sort of support to the view that what we are doing remains relevant in terms of services for our clients. Now here, there are strong partnerships with the foundation model companies. There is extremely strong internal work on topaz fabric.

We are building things where clients can use multi-model scenarios within topaz fabric, where they can use different models for different types of work, so the token cost is

optimized. We have an ability to provide a harness so that they can build what they want to build and keep the sovereignty of the data and like the knowledge of the company more within themselves. So to me, all of that points to that, it's a nice growth area for the long term. And we are now looking at 8%. It's fairly sizable, and we're looking at it becoming more and more sizable in the quarters to come.

Ankur Rudra: Just one last clarification.

Jayesh Sanghrajka: Sorry, I could just one additional data point I would want to add is, if you remember, in February, we talked about revenue, which was 5.5% for Q3. And in 2 quarters, it's already become 8.2%. So you can -- you can imagine the rate at which is growing. And it's -- even if you look at a longer 5-, 6-quarter view, it's growing at a strong double digit and that kind of gives us the confidence that this is becoming our growth engine.

Ankur Rudra: I appreciate it. Maybe just one clarification, Jayesh. Can you confirm that the program termination was fully absorbed in Q1? Or will it have an impact in the second quarter also from a sequential basis.

Jayesh Sanghrajka: So Ankur, the program has been terminated. What we know has been -- has obviously been taken in Q1 at this point in time.

Ankur Rudra: So no follow-through in Q2 in terms of that program specifically.

Nitin Padmanabhan: Yes. What we know at this point in time has been considered in this .

Bryan Bergin: First sill congrats to you and congrats to Dash. My first question is on AI talent and competition. I'm curious what your view is on hyperscalers like AWS, Microsoft recently announcing new investment in their own FTE practices. Just considering arise use of the services channel around cloud deployment, they seem to be a bit more surprising and OpenAI or Anthropic doing it. So what are your thoughts there? And you've announced plans to add 6,000 frontier engineers. -- but it seems everyone is looking to add that base of talent. So can you just talk about how you plan to navigate that elevated competition for top tier talent.

Salil Parekh: So first, thank you I think on the -- with other companies launching services companies to help large enterprises with making AI work. At a high level, I see that as a

positive for Infosys because it reconfirms that what we do and now with the AI revenue growth that we are demonstrating that we have sort of relevance for the long term for our clients. What I think works for us is we have over 300,000 employees. We have deep knowledge and context of select clients that we work with, and that becomes the way to really ensure that AI gets leveraged into that environment, which is typically quite complex.

We are also in a position where we are partnering with some of the companies you named, and I've spoken with them as they have launched their programs -- and the intent and the idea is really, in terms of scale, a few hundred or a couple of thousand is not going to be the same as 300,000 from Infosys. But there is a way to partner and make all of that work for the benefit of the client. That's how at least we're looking at it for now. And there's a similar type of models existed, as you probably know well in the past when there were software companies, which have their own small services businesses.

In terms of talent, first, we have already people within Infosys who are operating at the level of frontier engineers. And so we have put together a program to bring all of that together to make them at the same type of a global level. Then we have training for the people that we will recruit and build out to be like that frontier engineers. And then, of course, we will look externally but the primary method is recruitment in college training and taking internal people who are doing some of that type of work. and making sure they're fully deployed into the frontier engineer work. So we feel that we have a decent start to it.

It's not that we are going to, tomorrow morning, recruit 6,000 from the outside. But equally, we also have, as has been always the case with Infosys, the approach of training the people from ground up, so building out that skill set, which is slightly longer, and that's why I've sort of said it's not it's over a few years, we want to build it out and make sure that we support our clients in that.

Bryan Bergin: Okay. Okay. That's clear. My follow-up on AI productivity. Can you just give us a sense of how much of your existing backlog has been repriced the higher levels of market productivity. I'm trying to understand how long the company may face outsized compression as you renew the installed base of work where there wasn't any meaningful GenAI-driven efficiencies before?

Salil Parekh: So as you can imagine, it's something we look at internally, but it's not something we share externally.

Vibhor Singhal: Just two questions from my side. One question, Salil, on the -- basically the overall environment in which we are operating. Some of our peers have kind of called out, and I think it's kind of what is also the concept which is gaining traction is that more and more believe that enterprises might not just basically look to deploy the premier large language models for their enterprise needs and they might be now going more towards more like customized small language models, the which can be basically cater to their own specific needs.

And to that extent, more and more deals and large deals specifically are all basically making their way into the market towards the players -- is that also that we are also seeing our noncomposition with the clients? Do we see some of those kind of deals on the horizon? And do you see that basically playing out over the next few quarters?

Salil Parekh: So there, I think the way you describe it, what we are seeing it is the large companies, large enterprises are becoming more sensitive to -- what is the foundation model like best equipped for and for the various tasks and activities and processes that they have inside the company, which model should be used for which thing? So can we use like a company might think like a less parameter model, also less expensive model like an even an older version of some of the big company models for some last and the most recent one for like some very specific, let's say, high-end type of task, which needs it. So that optimization is going on.

And that's where we think what we have built in Topaz Fabric allows the company to do this in a very efficient way. Then it also looks at companies also looking at, okay, I will use for the simpler task, a slightly older model or less expensive. Then let me also then look at the cost of token usage for that model. And even there, there's a way for the same effectiveness, you can get a lower token cost approach in the model this whole approach of this multi-model is critical for the task and the cost. At least we are seeing the large companies are being sensitive to that.

And that's where what we have built and how we can work with them today, we are working in Topaz Fabric with 15 different models. So let's say, you come as a large company, Global 100, and you want to do something, you don't even have to decide by looking at the task we will decide between the 15, where to put it and give you the most efficient outcome. So those are things like that will help the companies to do the things in a better way we feel

Vibhor Singhal: Got it. Got it. So overall, this should basically -- I mean, if I were to, let's say, take a top few of this, this would mean that there is an increasing level of that or, let's say, a specific requirement that each client would require rather than more of a standardization to begin with?

Salil Parekh: It depends also a little bit like some companies might say, this is available. But some companies might say, look, I want Model X. I want to build deep capability in that Model X, like company X will have three models. They can go with an older model in the company X it's not like there's one answer, meaning people are all doing different things, but the flexibility exists today. So depending on how the company wants to do it.

Vibhor Singhal: Got it. Got it. Just 1 last question on the margin spend. ash, if I could just bother you on that. In FY '26, we had the wage hike, which was spread over Q4 FY '25 and Q1 FY '26. So we just probably had a -- basically half of the impact of the wage hike in FY '26. In FY '27, we're able to give the wage hike in Q3 and Q4. So the entire impact is going to be absorbed by in this year itself, plus we have the acquisition impact, which you called out in the call. So are we looking at more headwinds this year on the margins than FY '26.

I know we are in that same guided range of 20% to 22%. But vis-a-vis effect or dare we looking at more headwinds than FY'26?

Salil Parekh: So ever, if you look at FY '26, we had a full year impact of the wage hike that we gave in January as well as in April, right? Of course, whatever we gave in January, the flow-through of that was for 3 quarters. But whatever we gave in April, the full year impact of that came in, in the year versus in FY '27, we have only half year impact of whatever we do in October and 1 quarter impact of what I will do in January. So to that extent, the relative impact is going to be lower in FY '27 versus FY '26.

And of course, there would be a 50 basis point impact on account of the acquisition that we have called out on acquisition, but if you look at the tailwinds that I called out, there is a currency tailwind, at least as we stand today versus the last year, the project maximum is still creating value. We have seen pricing benefit a bit a little lesser than what we estimated at the beginning of the year. Utilization has gone up quarter-on-quarter significantly. Our on-site mix is going to go down. So I think there are puts and takes on both sides.

Keith Bachman: Good evening, good morning. I wanted to ask about your thoughts on head count growth trends through FY '27. And I'm not looking for specifics, but just generalities. Is head count going to grow, be flat, reduce as you look at the next 12 months. And even if you find on the next few years, how do you see the head count growth in relation to revenue growth?

Salil Parekh: This is Salil. So first, what we saw in the last financial year, as you know, is we recruited 20,000 college graduates for the full year. This year, we have a plan to recruit 20,000 college graduates. In the first quarter, we have recruited over 4,000 already. Our plan is to continue to bring in talent, make them more and more AI, well verse and then have them work with our clients. What we are seeing with the 8% revenue of the AI is that to make many of these things work, it's a combination of foundation model, agents and people. Of course, there's more efficiency.

So the same amount of work can be done maybe with a few people, but there's more work. So overall, at least right now, we are seeing that. We don't have an exact external view on the India headcount, but we continue to look at recruitment. We think it looks like it will be part of -- the head count will be part of our future as our revenue grows as well.

Keith Bachman: Okay. Okay. And it will be interesting to see how I understand the recruitment process, it will be interesting to see how your net head count trends unfold. Can I go to the dislocation? You talked about 20% of your CCV was vendor consolidation deals. Could you provide some context on really the economics associated with those deals, what I mean by what was the leverage that enabled you to win those deals. In particular, you talked about price was a little more aggressive this quarter. How are pricing trends during the enabling you to win those deals? Just any kind of attributes that you could throw out such as was it more competitive? Or was price down?

Anything along those lines? That tones many things.

Salil Parekh: I'll start, and Jayesh will add a little bit more to it. What we saw like in the reasons for winning a consolidation deal, typically, what we are noticing is a complex tech environment, and the clients are seeing that what we have done for them over the past in terms of delivering value is very significant, more reliable and that's typically when we are the beneficiaries of the consolidation deals. In terms of pricing for those specific deals, there's always productivity benefits because that is in the nature of the discussion in this

period. But the reason primarily for the wins are more about the depth of delivery, understanding of technology.

Jayesh Sanghrajka: Just to add to this, what Salil said. On an aggregate level, all of these consolidated deals came at a very healthy margins even when you compare to our overall large deal portfolio. As I said earlier, we will compete aggressively in the market but we are not going to underwrite uneconomic productivity assumptions. And in those cases, we would prefer to not pursue those deals further when it doesn't make economic sense to us.

James Friedman: So well done piloting the company in . We look forward to working together. I had a bigger picture question back to the strategy Hexagon be interested in your perspective on the supply side, what sort of rising reskilling does that require? And on the demand side, Salil mentioned what you're finding is resonating most obviously, is performing well. Is there anything though that needs to be adjusted? So supply and demand question about the strategy at Hexagon?

Salil Parekh: Thank you for that. On the supply side, first, we have taken a view, and I'm sure you know that. We have not done any staff restructuring in the company, we have done essentially all reskilling. And that is a significant work for the company. But I think we see a benefit of that over time. What we are seeing is -- and has another reason for doing the college graduate hiring because what we see from colleges up people coming in with a lot more native understanding of the AI landscape and the tool set.

And then building -- like training them on our Fabric Topaz is the next step after that and also training them on our tools, which are pre-AI so that we have a sense of how software development works. So we think we will be able to manage a lot of that supply side with the people we bring in. But there are also specialized things where there will be some accelerations needed -- I mean a specific tool is very much in demand. And for that, of course, we have some recruitment, which is more lateral as well. Even there, we need a little bit of reskilling or training, but not massive. There's good understanding.

But that, of course, is in short supply. So we will still rely more heavily on bringing in from college training, which is by design is a longer duration process. On the demand side, we are now tracking each of the six areas pretty granularly as Jayesh mentioned earlier, we have good traction on the process AI side, it's going pretty well. On the AI engineering, it's going pretty well. meaning in terms of scale, all of them are growing very fast, but those

things are pretty scaled already. The data AI part is going pretty well. And so the whole work of building agents doing the coding, doing the modernization, doing the data.

Those things are really scaling up, meaning have a decent scale today, and we think those will continue going pretty well.

Salil Parekh: Thank you. So first, thanks, everyone, for joining. A couple of points to summarize from my side. Overall, in the quarter, we had neutral revenues, strong margins, strong free cash flow and very strong large deals. The more critical thing, AI services revenue, 8%, growing across quarters, Q-on-Q, double digit and becoming more and more of scale for us and showing us therefore, that there is a long-term relevance of what we are doing for our clients. And that gives us a tremendous benefit given the client connects that we have across the different industries and across the different markets. So thank you all for joining in, and we'll catch up at the next quarterly call.

Operator: Thank you very much, members of the management. And ladies and gentlemen, on behalf of Infosys Limited, that concludes this conference call. Thank you all for joining us, and you may now disconnect your lines. Thank you.

Motley Fool issues A.I. buy alert

This tech could reach \$80 trillion. Imagine a technology worth over 16 Nvidias (https://api.fool.com/infotron/infotrack/click?apikey=35527423-a535-4519-a07f-20014582e03e&impression=5ad08284-238f-4630-b589-7a6683e34840&url=https%3A%2F%2Fwww.fool.com%2Fmms%2Fmark%2Fa-sa-ai-boom-nvidias%3Faid%3D10891%26source%3Disaediprm0000138%26ftm_cam%3Dsa-ai-boom%26ftm_veh%3Dpromobox%26ftm_pit%3D17872).

What in the world could be worth 16 Nvidias? The answer is a radical tech breakthrough that our experts think is transforming every walk of life. And this giant leap forward has many on Wall Street very excited.
